

NITHIN VIHASH MOHAN

ASPIRING AI/ML ENGINEER.

MOBILE : +91 9025833098

CONTACT : nithinvihash@gmail.com

CAREER OBJECTIVE:

Aspiring AI/ML and Software Engineer with a strong foundation in Python, C++, MySQL, and software development, passionate about building practical and intelligent solutions to real-world problems. Seeking opportunities to apply my technical knowledge, strengthen my engineering skills, contribute to impactful projects, and continuously learn emerging technologies while growing into a versatile and capable technology professional.

EDUCATION:

- Successfully completed Secondary Education at Shrikkara Vidhya Mandhir, CBSE, in the academic year 2022-23, with a percentile of 88.6%.
- Achieved Senior Secondary Education at Shrikkara Vidhya Mandhir, CBSE, in the academic year 2024-25, with a percentile of 88.2%.
- Currently enrolled in a Computer Science Engineering program (focusing on Artificial Intelligence and Machine Learning) at KCG College of Technology, Chennai.

KEY SKILLS:

- Languages: Python, Java, C, JavaScript, SQL, HTML, CSS
- AI / Computer Vision: OpenCV, YuNet, SFace, Face Detection, Face Recognition
- Web Development: React, Vite, Tailwind CSS, JSX, Responsive Web Design
- Python & Software: pytsx3, Vosk, OOP, Modular Architecture, Plugin Architecture, Event-Driven Architecture, Unit Testing
- Databases: MySQL
- Tools: Git, GitHub, VS Code, npm, pip, Chrome DevTools

PROJECTS

NOVA — Personal AI Assistant

Python | OpenCV | YuNet | SFace | pytsx3 | Vosk | Git | Modular Architecture

- Developed a modular, privacy-focused personal AI assistant in Python for local desktop automation and intelligent interaction.
- Built a plugin-based architecture with command routing, configuration management, event handling, logging, and safe desktop automation.
- Implemented offline text-to-speech using pytsx3, including voice on/off/status controls and spoken responses.
- Implemented face authentication using OpenCV, YuNet, and SFace for face detection and recognition.
- Integrated Vosk for offline speech recognition and designed NOVA for modular expansion through independent plugins and services.
- Designed the architecture for future AI capabilities, long-term memory, coding assistance, Git/project awareness, and device connectivity.
